

Labels that were once two-dimensional can now stand out with crystal-line doming! Doming is a two-component polyurethane that creates a "lens look" over the decal. This clear, non-yellowing coating is resistant to UV exposure, dents, scratches, and abrasions, making it an excellent choice for outdoor applications.

Combine doming with embossing to achieve more depth to your nameplates or decals. Add brilliance with a wide variety of colors and materials. Doming can be custom die-cut to almost any shape* or size. Try selective dome to add emphasis to specific areas or logos. Special shapes can be made to fit recessed areas or match blueprints. Get creative with crystal-line doming!

* Special art setup is needed for doming. Please refer to doming art specs.

AT A GLANCE

MINIMUM DOMING THICKNESS:

- .05"

STANDARD HARDNESS:

- 30-33 Shore D at 77° F (25° C)

CLEANABILITY:

- Antistatic spray
- Ethanol
- Isopropyl alcohol

WEATHER EXPOSURE:

- 5+ years

OVEN AGING:

- 177° F (80° C)
- -22 to 177° F (-30 to 80° C)

BENEFITS:

- UV and salt-spray safe
- Abrasion resistant
- Automotive-Grade
- Marine-Grade for outdoor motors

TYPES OF DOMING:

- Classic doming
- Selective doming
- Double dome*
- Colored dome*
- Phosphorescent doming*
- Thermo-chromic doming*
- Fragrance doming*

*May require a minimum quantity order
